*polyester paddles,
what are they used for?*

*paddle is the one of the machines that
mechanical effects given in order to
process the raw hides and react with
various chemicals. paddle is the half-
cylinder shaped systems in which the
hides are moved together with the fluid.*

- *during the process in the paddle pool, the mixing of the product is done by wooden wheel wings.*
- *there are hydraulic valves for the discharge of the fluid in the pool.*
- *at the end of the process, the product is discharged by the hydraulic moving pistons tilting of paddle main body.*

*advantages of paddles;
the ease of loading the material and the
easy process control, do not damage the
leather, the easy flow of discharge fluid
from the paddles installed with high
legs, and the ease of transportation
with the wheeled transport trolleys
placed under the paddles.*

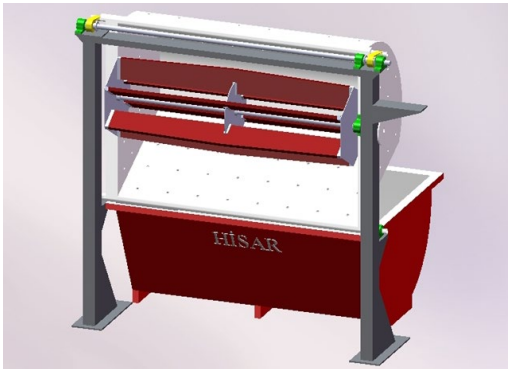

*[a tannery production are a with our
polyester paddles]*

polyester
paddle

polyester paddles in required capacities

A special type polyester is used as the main body material in polyester paddles, and this polyester type is resistant to chemicals and mechanical effects and has a long useful life.

“completely flexible production according to customer demand”

hisar developed the classic paddles design used in tanneries and produced “double-body paddles”. the purpose of this development is to save waste water and chemicals by taking only the processed product and keeping the fluid in the paddle pool as reusable.

on-site installation service

with more than 30 years of export experience, we offer optimum support in trade and transportation.

[2700 square meters of production area]

*word standards in tannery
machines*

*our after sales support, service and
spare parts service policy is; fast and
customer satisfaction oriented.*

*hisar stands out with its 50 years of
experience and achievements in its own
sector; provides first-class service in
manufacturing, service and spare parts.*

*hisar has manufactured nearly 2000
machines and delivered all over the
world. also hisar's export rate in recent
years is 90% or more of its yearly
production.*

"why hisar ?"

*the entire production of hisar takes
place in its own production workshop,
thus quality control is carried out at
every moment of production.*

*hisar; aiming to be high quality,
standard and economical in all
machines.*

*besides of manufacturing, we also offer
you engineering solutions.*

*since 1973,
we are producing for you*
